

WIRELINE PRESSURE  
CONTROL

# PRESSURE CONTROL EQUIPMENT

Quality PCE allows our customers to focus on executing targeted downhole services. GSI provides a variety of wireline pressure control equipment for both cased and open hole, including experienced operators, for a professionally run job site. GSI has pressure control packages suitable for both electric line and slickline support. We can support your land, inland, shelf, and deepwater needs both domestically and internationally.

## 5k-15k Grease Injectors

Gulfstream's grease injectors deliver pressurized grease to flow tubes to create & maintain a seal against the wire during wireline operations.

## Diesel Test Pumps

Gulfstream's test pumps are used for safe and efficient testing of wellhead equipment in the shop or offshore.

## EQUIPMENT SPECIFICATIONS

### 5K - 15K GREASE INJECTORS

- Grease Injector Unit — Dual air/hydraulic grease pumps
- 100' Discharge Hose & 100' Return Hose
- 2-100' Auxiliary Hoses
- 2-1/4" x 50' 10M Hose to monitor well pressure from grease injector control panel.
- 4 or 5 Tube Grease Head (Bowen Series II — packoff/linewiper)
- Synthetic Honey Oil and Biodegradable Hydraulic Oil Used

### DIESEL TEST PUMPS

- Single Skid
- 5k - 20k
- Weight: 3,900 - 4,350 lbs
- 4.27 - 5.6 BBL Holding Tank

### ADDITIONAL OFFERINGS

Wireline Pressure Control rig ups and equipment will vary depending on the application, site location, and client requirements. Additional support offerings include 1502 flow iron, catch tanks, choke manifolds, squeeze manifolds, gas busters, low pressure hoses and connections. Adaptor spools, riser spools, gate valves, flow crosses, and flanged plug valves may all be included on one service ticket upon request.
